

Volvence:

Beyond Agents, Full Autonomy AI with Human-Level IQ and EQ

The infrastructure for digital lives.

Existing Customer Connections:

45M followers, 50K enterprise
customers base

Core Engine:

Ready for Commercial deployment

Team:

World class Machine Learning
scientists + Serial Entrepreneurs.
from CMU, PKU & THU

Volvence Ltd, Hong Kong

Apr, 2026

What Is Volveence?

A full autonomy digital life with **human-level IQ and EQ**, capable of delivering **companionship value** and **commercial value**, created through **multi-module** and **online continual learning technologies**.

Already Implemented:
The cloned brain from a
Novel

Company Overview

1.1 Problem & Opportunity

3 essential parts for a Full Autonomy AI

✗ Mainstream AI

- Prompt-only
- No persistent goals
- No real memory & **abstractions**

✓ Volence

- Self-driven goals
- Real experience
- Goals → Experience
→ Cognition

It's autonomy, not capability.

1.2 Problem and Opportunity

Body gives goals; brain learns

✗ Mainstream AI — LLM + Context Only

- No body, no goals
- Text-only learning
- Simulates, doesn't live

✓ Volvence — Body + Brain

- Body drives goals
- Brain gains experience
- True autonomous digital life

📌 No body, no action. Volvence gives AI purpose.

2.1 Product Scenario

Companionship is **long-term relationship** optimization

✗ Mainstream AI Companions

- Replies well, forgets you
- No stable personality
- Novelty fades, churn follows

✓ Volvence Companions

- Remembers, grows, bonds
- Stable personality, recurring value
- Long-term relationship, high LTV

 Current User Connection & Revenue Projection Basis

Activation
1% of 45M fans

Annual Conversion
10% to annual

Price
USD 42/year

Revenue
~USD 1.87M/year
30% goes to Volvence

 These figures are based on existing partner audience size and estimated conversion rates — not forecasts pulled from thin air.

2.2 Product Scenario

Parenting needs long-term decision making support

Volvence tracks each child and supports parents over time.

✗ Mainstream AI Parenting Assistant

- Talks to the child
- Generic answers only
- No past patterns

✓ Volvence Parenting Expert

- Understands the child over time
- Practical advice, clearly
- Warns about risks

Current User Connection & Revenue Projection Basis

- Our Joint Venture with Gao Gailun 15M followers, 30% share
- Existing parenting platform partner audience
- Audience × activation × conversion × price

\$6.25M

Projected annual revenue

 Knowing what happened is not enough. Volvence tells you what to do next.

2.3 Product Scenario

Private traffic isn't an ad channel — it's a relationship engine

SCENARIO 3A: MOBI PRIVATE TRAFFIC DIGITAL EMPLOYEE

✗ Traditional Private Traffic AI

- Only pushes sales and ads
- Users feel harassed and annoyed
- Low conversion, high churn

✓ Vulence Digital Employee

- Gets to know you like a friend
- Remembers preferences, needs, and life context
- Recommends the right product at the right moment
- Learns over time — LTV keeps growing

📊 Current User Connection & Revenue Projection Basis

Based on Our Joint Venture:Mobi's existing audience, these are real partner numbers rather than assumptions

Fan base
Mobi audience

Conversion rate
Sales target

GMV per user
Per person

Our Annual share revenue
30% share

📌 Be a friend first, recommend later — that's how private traffic should work.

2.4 Product Scenarios

Cross-border commerce needs AI experts

SCENARIO 3B: HEYI / GUOMAO AI CROSS-BORDER E-COMMERCE EXPERT

✗ Traditional Cross-Border E-Commerce

- Large human teams
- Slow, manual processes
- Fragmented tools

✓ Volvence Autonomous E-Commerce Expert

- One AI runs it all
- Learns and improves continuously
- Unified brain across functions

Current User Connection & Revenue Projection Basis

- Grounded in existing partner base
- Our Joint Venture: Hengyi / Zhejiang Guomao customers, total 50K enterprises from 1688.com
- Real revenue projection basis

\$3.47M

- 1% annual subscribers
- USD 6,900/year
- Of which 38% goes to Volvence

3.1 Technical Path

Step 1: Define Body first, then intelligence

Mainstream AI bolts on prompts; Volvence builds a full **body + brain** system for autonomy.

✗ Mainstream

- Stuff models with everything
- Patch with prompts
- Fragile, not autonomous

✓ Volvence

- Build body + brain first
- Designed for autonomy
- Living system, not patchwork

📄 Mainstream patches intelligence. Volvence builds it.

What We Define as the Body:

Personality/Characteristics

Needs

Hormonal Profile

Embodied Capabilities

3.2 Technical Path

Step 2: Become them: Soul Migration from Novels, etc

✗ Persona Prompting

- Describe a persona
- Loses context
- Shallow imitation

✓ Votence Transfer

- Transfers values and worldview
- Captures thinking logic
- Becomes them

📄 Votence architects identity.

3.3 Technical Path

Step 3: Evolve online

Volvence starts from **personality, values, and core needs**.

1

Complete

Keep the map whole.

2

Accurate

Stay true to core.

3

Fast

Turn feedback into cognition.

4.1 Barriers and Model

One engine, many revenue paths

Volvence sells one **Digital Life Engine**, not features.

- ✓ Asset-light scaling, higher margin.

4.2 Barriers and Business Model

Capability chain in motion

✓ Resource Integration

45 million fans; 50,000 enterprise customer base connection.

✓ Project Progress

Signed 4 JVs and 2 more in April. 200K deal in 1.5 Months

✓ Technical Validation

Brain/Soul migration validated.

✓ System Architecture

Multi-module human-machine loop.

4.3 Barriers and Business Model

Moat = full digital life system

✗ Mainstream AI Moat

- More parameters
- Easy to copy
- No differentiation

✓ Volvence Moat

- 40+ ML papers, Active learning with 1/1K data
- Body + brain + data
- Compounds over time

📌 Scale parameters; don't copy systems.

5. Financials & Funding

Build entry first, then scale

Define entry points and partners, then project from real conversion.

Asset-light SaaS lifts margins; ARR is USD 3.33M – 5M in 2026 and USD 13.89M – 23.61M in 2027.

5. Finance & Funding

From validation to infrastructure

The team spans research, engineering, commercialization, and deployment.

Phase One

Close
revenue
loops

Phase Two

Expand
scenarios

Phase Three

Companionship
e-commerce

Ultimate Goal

Power
Digital Life
as a Service

6. Core Team

1

Zhao Jiangbo — Founder / CEO (Full-time)

- Peking University CS; MBA
- IBM Japan · HP · Alibaba · Tencent
- Led 500M–1B segments
- Serial founder: Huaxiaobao, SolanaData.io, Hao Pai (Commercial Exit)

2

Yang Liu — Co-founder / Chief Scientist (Full-time)

- World Top-10 active learning; top-100 machine learning theory scientist
- CMU PhD; advised by Avrim Blum and Jaime Carbonell
- IBM · Yale postdoc
- 40+ papers; 18 A-list

3

Wang Cangyu — Co-founder / CSO

- Entrepreneur, PhD Psychology; Visiting Professor
- Formerly Zhongqi Media founder / GM, Douyin(TikTok in China) Best Agency; revenue to \$0.9B

4

Zhang Chi — Co-founder / CTO (Full-time)

- Tsinghua CS graduate at 19
- Glodon core tech team
- Hao Pai co-founder; Web3 gaming tech director
- Long-term CEO collaborator; strong delivery

5

Wu Xiang — Co-founder / CMO (Full-time)

- HP · Neusoft executive
- Law BA, MBA; 20 years marketing
- Led billion-RMB campaigns
- Scaled tech products globally

Appendix — Dr. Yang Liu's Academic Highlights

40+ top papers in reinforcement learning, active learning, transfer learning, and online learning. 18 selected A-tier papers:

Importance	Thesis	Journals/Conferences	Publish Date
5	Computing and Testing Small Connectivity in Near-Linear Time and Queries via Fast Local Cut Algorithms	ACM-SIAM Symposium on Discrete Algorithms (SODA)	Jan 2020
7	Surrogate Losses in Passive and Active Learning	Electronic Journal of Statistics (EJS)	Nov 2019
9	Minimax Analysis of Active Learning	Journal of Machine Learning Research (JMLR)	Jan 2015
11	Active Learning with a Drifting Distribution	Annual Conference on Neural Information Processing Systems (NIPS)	Dec 2011
13	Buy-in-Bulk Active Learning	Annual Conference on Neural Information Processing Systems (NIPS)	Dec 2013
14	Active Property Testing	IEEE Annual Symposium on Foundations of Computer Science (FOCS)	Oct 2012
17	Activated Learning with Uniform Classification Noise	International Conference on Machine Learning (ICML)	Jun 2013
18	Online Learning by Ellipsoid Method	International Conference on Machine Learning (ICML)	Jun 2009
19	Online Allocation and Pricing with Economies of Scale	Conference on Web and Internet Economics (WINE)	Dec 2015
20	Risk-Averse Matchings over Uncertain Graph Databases	ECML PKDD	Sep 2018

Appendix– Dr. Yang Liu's Academic Highlights (cont. 2/4)

Importance	Thesis	Journals/Conferences	Publish Date
28	A Boosting Framework for Visuality-Preserving Distance Metric Learning and its Application to Medical Image Retrieval	IEEE Transactions on Pattern Analysis and Machine Intelligence (TPAMI)	Jan 2010
32	Semi-supervised Learning with Weakly-Related Unlabeled Data: Towards Better Text Categorization	Annual Conference on Neural Information Processing Systems (NIPS)	Dec 2008
33	Unifying Discriminative Visual Codebook Generation with Classifier Training for Object Category Recognition (Oral)	Proceedings of Computer Vision and Pattern Recognition (CVPR)	Jun 2008
35	Discriminative Cluster Refinement: Improving Object Category Recognition Given Limited Training Data	Proceedings of Computer Vision and Pattern Recognition (CVPR)	Jun 2007
38	An Efficient Algorithm for Local Distance Metric Learning (Oral)	National Conference on Artificial Intelligence (AAAI)	Jul 2006
39	Semi-supervised Multi-label Learning by Constrained Non-negative Matrix Factorization (Oral)	National Conference on Artificial Intelligence (AAAI)	Jul 2006
1	Bandit Learnability can be Undecidable	Annual Conference on Learning Theory (COLT)	Jul 2023
2	Active Learning with Identifiable Mixture Models	In submission to Annals of Statistics	2023
3	Reliable Active Apprenticeship Learning	International Conference on Algorithmic Learning Theory (ALT)	2025
4	Toward a General Theory of Online Selective Sampling: Trading Off Mistakes and Queries	International Conference on Artificial Intelligence and Statistics (AISTATS)	Apr 2021

Appendix Dr. Yang Liu's Academic Highlights (cont. 3/4)

Importance	Thesis	Journals/Conferences	Publish Date
6	Statistical Learning under Nonstationary Mixing Processes	International Conference on Artificial Intelligence and Statistics (AISTATS)	Apr 2019
8	A Theory of Transfer Learning with Applications to Active Learning	Machine Learning	Feb 2013
10	Identifiability of Priors from Bounded Sample Sizes with Applications to Transfer Learning	Annual Conference on Learning Theory (COLT)	Jul 2011
12	Learning with a Drifting Target Concept	International Conference on Algorithmic Learning Theory (ALT)	Oct 2015
15	Bounds on the Minimax Rate for Estimating a Prior over a VC Class from Independent Learning Tasks	International Conference on Algorithmic Learning Theory (ALT)	Oct 2015
16	Bayesian Active Learning Using Arbitrary Binary Valued Queries	International Conference on Algorithmic Learning Theory (ALT)	Oct 2010
21	Bounds on the Minimax Rate for Estimating a Prior over a VC Class from Independent Learning Tasks	Theoretical Computer Science (TCS)	Mar 2018
22	Learnability of DNF with Representation-Specific Queries	Innovations in Theoretical Computer Science (ITCS)	Jan 2013
23	Testing piecewise functions	Theoretical Computer Science (TCS)	Oct 2018
24	The Sample Complexity of Self-Verifying Bayesian Active Learning	International Conference on Artificial Intelligence and Statistics (AISTATS)	Apr 2011

Appendix Dr. Yang Liu's Academic Highlights (cont. 4/4)

Importance	Thesis	Journals/Conferences	Publish Date
25	Negative Results for Active Learning with Convex Losses	International Conference on Artificial Intelligence and Statistics (AISTATS)	May 2010
26	Dynamic Matrix Factorization with Social Influence	IEEE International Workshop on Machine Learning for Signal Processing (MLSP)	Sep 2016
27	Characterizing the Distortion of Some Simple Euclidean Embeddings	The European Workshop on Computational Geometry (EuroCG)	Mar 2016
29	How Much Distortion Can be Incurred from One Bad Point?	Fall Workshop on Computational Geometry (FWCG)	Oct 2015
30	Cost Complexity of Proactive Learning via a Reduction to Realizable Active Learning	Tech Report CMU-ML-09-113	Nov 2009
31	Adaptive Proactive Learning with Cost-Reliability Tradeoff	Tech Report CMU-ML-09-114	Dec 2009
34	Bayesian Active Distance Metric Learning (Oral Presentation)	Proceedings of the 23rd Conference on Uncertainty in Artificial Intelligence (UAI)	Jul 2007
36	Learning Distance Metrics for Interactive Search-assisted Diagnosis of Mammograms	Conference on Computer-Aided Diagnosis, SPIE Symposium on Medical Imaging	Jun 2007
37	Resource-constrained supervised dimensionality reduction (Oral Presentation)	International Workshop on Multimodal Information Retrieval at IJCAI	Jun 2007
40	Algorithm of Image Registration Based on Edge Matching and Multi-scale Wavelet Transformation	Journal of Huazhong University of Science and Technology (Natural Science Edition)	Nov 2004

Upcoming publications:

- Paper 1: Simpler Active Learning with Surrogate Losses — done, NeurIPS May 2026
- Paper 2: Confidential — AAAI 2026 or ICML 2027
